

EXTRA AGE BULLS

Because of customer demands our Extra Age Bull section continues to grow. The bulls are raised at our Sangudo farm where Kyle is calling home, and running the operation. The bulls are born in May and June. Calving later on grass has allowed us to take advantage of many of Mother Nature's strengths. We are able to run these summer calvers very cost effective, utilizing stock piled grass for winter grazing as well as swath grazing. Our winter born heifer pairs spend the summers at Sangudo, where the heifer calves when weaned are developed out there. The cows run on stock piled grass and swaths to return back to Spruce Grove just prior to calving in mid December. The Extra Age bulls need to be looked at in a different light than the yearlings. They are managed at a lower level than the yearlings and are more mature and developed at breeding time, which many customers who are breeding early have appreciated. Last year the Rochfort bull came out of our summer program, he was our high selling bull, going to Bonchuk Farms in Manitoba. **Same Genetics, Extra Age!**
